ENERGISE PROJECT

ENERGISE is an innovative pan-European research initiative to achieve a greater scientific understanding of the social and cultural influences on energy consumption. Funded under the EU Horizon 2020 programme for three years (2016-2019), ENERGISE develops, tests and assesses options for a bottom-up transformation of energy use in households and communities across Europe. ENERGISE's primary objectives are to:

- **Develop an innovative framework** to evaluate energy initiatives, taking into account existing social practices and cultures that affect energy consumption.
- **Assess and compare the impact** of European energy consumption reduction initiatives.
- **Advance the use of Living Lab approaches** for researching and transforming energy cultures.
- **Produce new research-led insights** into the role of household routines and changes to those routines towards more sustainable energy.
- **Encourage positive interaction** between actors from society, the policy arena and industry.
- **Effectively transfer** project outputs towards the implementation of the European Energy Union.

EXECUTIVE SUMMARY

This deliverable provides an overview of the more than 500 press and media appearances, including presentations at non-academic events, workshops and discussions organized, etc. completed by the members of the ENERGiSE Consortium during the course of the project. The appearances are organized by country and partner, and at the end an additional table is included that lists general and non-ENERGiSE country appearances (e.g. in international newsletters, on other project websites, etc.).
